ANOTHER SPECTACULAR ANNOUNCEMENT FROM HORSEMAN!

The Horseman SW612 was introduced as the world's first light-weight and compact as well as the super-wide 6x12cm camera. This was later followed by the SW612 Professional and then the SW6x9 Professional.

Up until now six lens units have been available for these wide-angle applications: 35mm/45mm/55mm/65mm/75mm and 90mm, all of these units provide superb Rodenstock quality lenses.

The new SW lens unit 135mm is the latest addition to this line-up, and may be an excellent solution for the photographer who would like to take "standard" shots with a 6x12 format.

Product Name : SW Lens Unit 135mm
Product Code : 21368
Date of Sale : June 2002

Specifications

Apo-Sironar-N 135mm F5.6
