## **Expanding Horizons.**

### **The Horseman Intelligent Shutter System ISS-G2 Can Now Work with Kodak and PhaseOne Digital Backs.**

---

Any view camera -- old or new, Horseman or other brands -- using the Horseman ISS-G2 can now interface with digital camera backs from Kodak and PhaseOne.

#### **Interface Cable for Kodak DCS Pro Back Plus**

This 1.5-meter cable connects the Kodak DCS Pro Back Plus digital camera back to the signal bus in the Horseman ISS-G2, exchanging control, signals between the two. This means that any view camera equipped with the Horseman Intelligent Shutter System, regardless of brand, can now be operated with Kodak's popular digital back. (Naturally, a Hasselblad standard back mount is required for the camera.)

#### **Interface Cable for One-Shot Operation with PhaseOne Digital Backs**

PhaseOne digital camera backs normally require two shutter actions -- one for activating, the second for actual shooting. But 1-shot action, much preferred by many photographers for ease and simplicity, is now possible with the help of this interface cable. It connects the Horseman ISS-G2 to the electrical contacts on the PhaseOne digital back, activating the PhaseOne a split second before the shutter is released.

**Product Name :** ADAPTER FOR KODAK AND Phase One BACK

**Product Code :** 23283

**Date of Sale :** December 2002

### **Specifications**

---

Exclusively for the ISS-G2

Cable : 1.5m
